

FOR IMMEDIATE RELEASE – October 1, 2021

**G2 NET-ZERO ANNOUNCES EXTENDED AGREEMENT WITH HUNT GUILLOT ASSOCIATES
BRINGING NEW LAYERS OF DEDICATED EXPERTISE TO PROJECT DEVELOPMENT SERVICES**

G2 Net-Zero CEO Angele Davis today announced an extension of their agreement with global development expert Hunt Guillot Associates (HGA). HGA will continue to manage all G2's project-related functions, providing additional layers of expertise to the project in support of bringing the facility online on-time and with uniform emphasis on superior levels of environmental, social and governance planning.

G2 Net-Zero is a Louisiana-based company building the world's first electricity, industrial gas and liquefied natural gas complex promising net-zero carbon emission products from upstream to dockside. By 2024, G2 – a venture of Chas Roemer Innovations – will be profitably producing and selling responsible emission-free electricity as well as industrial gases, including blue ammonia, argon, nitrogen and oxygen, while capturing all CO₂ emissions. Net-Zero LNG production will follow by 2027.

“Jay Guillot and his leadership team bring a combined 200+ years of unrivaled experience that continue to help us develop intelligently, harnessing innovation to drive productivity while keeping our costs down,” said Davis. “They have been a valuable and enthusiastic partner in powering G2 toward our execution stage. Finalizing our extension with them is another essential element of our movement toward on-time production of industrial gases, power and Net-Zero LNG.”

HGA is a multi-disciplined project management and engineering services company with an extensive track record across a range of industries in a variety of roles. In 2020, HGA's engineering and design team worked successfully with the leadership of a lithium extraction complex to install an innovative pilot plant that will demonstrate the viability of extracting battery-grade lithium from waste brine. The result was a state-of-the-art lithium extraction plant that was given ACEC's 2020 Grand Award for engineering projects in the “Industrial and Manufacturing Process and Facilities” category.

G2 retained HGA in 2015 and the program management and engineering company, led by HGA co-founder Jay Guillot, has been closely involved in nearly every facet of G2's multi-phase evolution.

New to the G2 team is Frank Gay, the vice president of HGA's owner representation services and a respected industry veteran with multi-dimensional experience in successfully delivering projects across the world on-time and on-budget. Gay also oversees HGA's carbon advisory services group. In 2011 and 2012, Gay was tasked with the overall project leadership of the detailed design, procurement and construction management of a challenging remote offshore platform in the Russian Far East. The team was responsible for successful oversight

of more than 4.5 million work hours with a peak force of 1,150 people operating in design offices in North American, the Asia Pacific region, Europe and Russia. The platform was fabricated in Korea and was designed to operate in the harsh Arctic waters off the coast of Sakhalin Island.

Also new to the team is Michael Tecza, an HGA principal advisor bringing 30+ years of global project experience across multiple industries to G2's development. Tecza is acknowledged throughout the industry as a building leader, dynamically managing diverse execution teams for complex projects across multiple industries.

Ernest Broussard, HGA's Southwest Louisiana Development Manager, will continue to represent G2 in impactful ESG guidance and support, landowner coordination, river pilot coordination, local community outreach and permitting input.

"HGA is proud to be adding new levels of expertise to support G2 in moving this project to successful execution," said Guillot. "Chas Roemer and G2 are committed to prioritizing ESG investment in Louisiana while profitably providing Net-Zero products to a world that is demanding clean alternatives. We are pleased to play a pivotal role in achieving their vision."

HGA will continue to deliver critical strategic input and guidance, owners engineering services, community engagement and ESG coordination, assistance on FERC submittals, gas pipeline FEED services, advisement on gas supply, and management of local interfaces.

###

About G2 Net-Zero

Based in Louisiana, G2 Net-Zero is an energy production complex utilizing NET Power's technology to produce net-zero electricity as well as a range of industrial gases by 2024, with Net-Zero LNG coming into production by 2027. The plant, which is housed on 1,200 acres along the Gulf Coast in Southwest Louisiana and is using technology provided by NET Power and Siemens, is a highly profitable model for the future of clean fossil fuel processing, yielding nearly emission-free electricity and by-products including blue ammonia, nitrogen, hydrogen, argon and oxygen. The facility will be the world's first liquefied natural gas export and industrial gas enterprise promising net-zero carbon emissions from upstream to dockside. G2's major differentiators and its value proposition – an ability to produce a range of high-value zero-emissions products, state of art technologies, one of the best remaining sites in the U.S. Gulf, commitment to social equity and responsible governance, plus its world-class development team – mean that G2 Net-Zero is without peer in the present day growing global energy market and will distinguish itself among competitors with strong financial returns and a commitment to sustainable business practices with positive impacts. www.g2netzero.com

About Chas Roemer Innovations

Chas Roemer Innovations is a management and business development firm running diverse enterprises. Recognizing that venture and risk are the chief portals to imagination, innovation, positive change, good health, greater knowledge and even greater prosperity, CRI is devoted to discovering, growing, promoting and managing the ideas that can transform the way we think, act and live. www.chasroemerinnovations.com

About Hunt Guillot Associates

HGA is a multi-disciplined project management and engineering services company providing professional services to an extensive portfolio of customers throughout numerous industries for more than 20 years. Their expansive client roster includes Fortune 500 and Fortune Global 500 corporations, state and local governments. HGA has ten locations throughout Louisiana and North America. They have provided full-service offerings in over 30 states, Canada, Mexico and internationally. With a staff of over 450 employees, HGA's expert personnel provide innovative solutions to solve complex technical and business problems. ENR recently ranked HGA's Program Management Business No. 40 out of the top-50 U.S.-based Program Management Companies and its Engineering Business as a top 500 Engineering Company.

Jay Guillot – Engagement Partner

Jay is one of HGA's founding partners – a team-oriented leader with 40+ years of experience delivering projects across the industrial and public sectors. His experience spans the entire project delivery system from inception through construction, across multiple business sectors, including energy. With a proven track record as a senior executive managing large projects, Jay brings expertise in project development, organizational development, owner representative services, engineering, client development and strategic project approaches.

Frank Gay – Vice President Owner Representation

Frank has more than 35 years experience in general, project and engineering management. He has helped execute design projects ranging up to 5 MM workhours and \$13 billion TIC. He has supervised multi-discipline staffs of up to 1,100 professionals, overseeing projects across the world in the petrochemical, petroleum, textile, fiberglass, and communications industries.

Michael R. Tecza – Principal Advisor

Michael is acknowledged throughout the industry as a building leader, dynamically managing diverse execution teams for complex projects across multiple industries for private and government clients. He has over three decades of experience in program and construction management of megaprojects. He advises clients across the globe on start-to-finish projects as well as providing intervention strategies for distressed developments, including direct management of recovery efforts.

Ernest Broussard, Jr., AICP / CEcD – Community Relations Manager

Ernest is a prominent planner and economic developer with 44 years of expertise in public policy determination, economic development, strategic and comprehensive planning and all facets of business and government development. With 11 national and state awards, he is associated with megaprojects throughout the Southwest Louisiana region, including the Jeff Davis Sugar Mill, the North Jennings redevelopment plan and the Cameron disaster recovery program. He is the author of several sustainability and resilience plans following the storm incursions of 2006, 2008 and 2020. His strategies for Cameron and Lake Charles, LA were recognized as “Best Plans” by the Texas A&M Bush School of Public Policy.
